

NEXSTGEN® Traditional UV Top Coat Directions For Use

To Apply:

Apply a thin and even layer over traditional acrylic, dipping acrylic or UV gel polish.

Cure under in an LED or UV lamp for 60 seconds.

With NEXSTGEN® UV top coats, there is no tack layer to remove.

To Remove:

Lightly file the gloss shine off the nail to break the seal.

Apply your favorite gel removal pads soaked with artificial nail remover and wrap each finger securely.

Soak for 10-15 minutes to allow the remover to penetrate the topcoat.

Use a removal tool, such as an orangewood stick, to gently push the polish off the nails.

If any top coat remains, rewrap the nails and soak for an additional 2-5 minutes to ensure complete removal.
